Annulohypoxylon cohaerens
(Persoon) Y.M. Ju, J.D. Rogers & H.M. Hsieh

OVERALL: Avalon, PVSP, 3/17/2011, R. Orr.

None

[*Annulohypoxylon cohaerens*](#)
Xylariaceae

J	F	M	A	M	J	J	A	S	O	N	D
---	---	+	---	---	---	---	---	---	---	---	---

ID: Purplish-brown to purplish-black; surface bumpy. Use KOH.

Habitat: Dense clusters on bark of beech (*Fagus*) only—highly host specific..

Fruiting body: 1/16 – 3/16" [1.5 – 3.5 mm]

Brown (purple-brown in age). Surface minutely bumpy. Single layer of embedded perithecia; sometimes has hollow center. Flesh dark brown/black below perithical layer.

Frequency: Uncommon.

Locations: AVORG.

Synonym: *Hypoxylon cohaerens*

Notes: Mycobank 500304. KOH releases sienna/orangish pigments. Identification by examination of spores by Richard Orr.
