**ID:** Body white/yellow/reddish mass w/ red-brown flecks.

**Habitat:** Expanding clusters. On rich soil, stumps, logs, or living plants. Usually seen in cool weather (spring and fall).

**Fruiting Body:** Up to 8" x 1.2" thick [20 x 3 cm] White/yellowish/ochre/pink w/ red-brown flecks. Slimy when young (smooth but brittle crust in age breaks away to show black spore mass).

**Spores:** Black/dark gray. Round, minutely spiny.

**Notes:** Cortex has calcareous granules. (Cortex of *Mucilago crustacea* has calcareous crystals.)

**Frequency:** Abundant.

**Locations:** BIGBR, BRNBR, CASCT, CEDLP, DANPV, ELKGP, FRANF, GONRA, GUIPK, HAMVL, HENPV, HOLLO, HOUCH, HTWMA, LONGC, MANWD, MARPV, MCPHPV, MPENA, MTPLL, MURHL, NOLAP, OTHER, PIGTL, RKBPR, ROBCN, SLMLP, SYRIV, TRIRS, UMDCF, WATLP, WINTR, WSKPV, WSTRP.

**Notes:** Mycobank 149977.

**Spores (7.0-8.0 [round] μm):** Wincopin Trail, 5/28/2016. R. Solem.
