**ID:** Peridium mustard-yellow and cottony. Sporangia reddish.

**Habitat:** Dense clusters. On decayed bark, leaves, etc. (depending on species..)

**Fruiting Body:** 1/32 – 1/8" [1 – 3 mm]

Sporangia reddish, smooth. Outer wall disappears, peridium expands to form cottony head.

**Frequency:** Uncommon.

**Locations:** HTWMA.

**Notes:** Identification based on macro characteristics, not examination of spores by microscope.

**References:** Myx [various and Plate 15]. R. Orr (*pers comm*).
