

***Tramea carolina* Linnaeus**

**Carolina Saddlebags**

**19 Apr - 13 Oct**

**Common**

**48-53 mm (1.9-2.1 in.)**

**Medium**

**MALE:** Head: reddish, forehead metallic-violet. Thorax: downy, reddish-brown. Abdomen: red, S8-10 black. Legs: dark brown or black. HWs: dark reddish-brown basal spot to outer edge of anal loop w/ red veins criss crossing. Stigmas: reddish- brown. Appendages: pale, darkened at tips; cerci long.

**FEMALE:** Forehead: dark blue. Face/Abdomen: brownish-red.

**JUVENILE:** Face/Abdomen: brownish red.

**Reproduction:** Male patrols large territory. Female oviposits alone or in tandem until female ready to release eggs; then male releases female as she dips to water surface and washes off eggs; then flies up and joins male; usually in morning or late afternoon (midday in cloudy weather).

**Notes:** Migratory. Old name: Violet-masked Glider.
