

Enallagma civile* (Hagen)*Familiar Bluet****20 Apr – 11 Nov****Common****MALE: 30-39 mm (1.2-1.5 in.) FEMALE: 28-36 (1.1-1.4)****Medium**

MALE: Head: top usually w/ 2 blue spots. Eyes/Face: blue. Thorax: blue w/ middorsal/shoulder stripes black. Abdomen: blue, S3-5 dorsal basal black triangles, S6-7 dorsal black triangles longer. Appendages: black. Head, Thorax, Appendages are hairy.

FEMALE: Color forms: Brown, Blue/Green. Thorax: pale rear edge of prothorax/pale middorsal thoracic line usually creates T-shaped mark; thin blue line divides middorsal stripe; thin shoulder stripes black. Abdomen: S4-7 black areas are pointed anteriorly (like bombs w/ fins); blue abdomen w/ dorsal black marks. Legs: spines, but short on tibia.

Habitat: Still or slow-moving water; rare on rivers. Common in newly formed sediment ponds, temporary or permanent waters, vegetated or not. Peak activity in late a.m. into afternoon; leaves water in late afternoon. Forages in flight by gleaning perched insects from vegetation.

Reproduction: Male is not territorial but defends perch. Mate about 20 minutes. Female oviposits in tandem in surface vegetation; female may descend underwater while male perches nearby to guard.

Notes: This species and *Sympetrum vicinum* (Autumn Meadowhawk) are the most cold hardy. Does not darken much at cool temps. Old name: Civil Bluet.
