

***Libellula cyanea* Fabricius**

Spangled Skimmer

14 May - 5 Sep

Abundant

38-47 mm (1.5-1.9 in.)

Medium

MALE: Eyes: dark green. Face: shining black. Thorax/Abdomen: pale blue pruinosity. Stigmas: bicolored black/white. Appendages: brownish, becoming black.

FEMALE: Face: whitish green. Abdomen: yellow or brown; S8 w/ flange. Wings: tips brown from stigma outward.

JUVENILE: Thorax: brown w/ creamy sides and lateral black stripe. Abdomen: pale gold w/ middorsal broad black band.

Habitat: Well-vegetated ponds. Forages in fields. Perches obliquely.

Reproduction: Male patrols from perch on grass or *Juncus* (rush) and flies out. Mate in flight. Female oviposits alone in still shoreline water while Male guards.

Notes: Old name: White Spangled Skimmer.
