

Libellula pulchella* Drury*Twelve-spotted Skimmer****9 May - 17 Oct****Common****42-57 mm (1.7-2.5 in.)****Medium**

MALE: Head: brown. Thorax: brown w/ 2 lateral yellow stripes (which fade w/ age). Abdomen: gray-blue pruinosity. Wings: alternating black and milky-white spots (10 white, 12 black); bands are not entirely across wing; tips dark. Appendages: brownish, becoming black.

FEMALE: Abdomen: brown w/ lateral yellow (or white) stripes. Wings: 3 dark spots on each.

JUVENILE: Brown.

Habitat: Temporary or new sediment ponds. Often returns to same perch. Wary.

Reproduction: Male is territorial and patrols over water. Female oviposits alone (unusual for *Libellula*) w/ long swoops to water surface. Exuviae in long grass on bank.

Notes: Old name: Twelve-spot, Ten-spot. Migratory along Atlantic Coast.

Similar Species: Female looks like female *P. lydia* (Common Whitetail) but abdomen is slimmer, has stripes (not spots) and tapers all the way to the tip.
