This receiver station is part of the **Motus Wildlife Tracking System**, which uses stations like this to track birds, bats, and other migrants. It can detect animals equipped with small radio-tags when they are nearby. It is one of hundreds of similar stations tracking animals around the world to study their movements and help conservation efforts.

This Motus Station was funded by the Howard County Bird Club.
To learn more about the club, please scan the QR code to the right.
